Highlights

In today's markets, consumers of business reports are demanding more accessible, reliable and timely information in order to make informed decisions. The adoption of the **eXtensible Business Reporting Language (XBRL®)** promises to help companies make faster and better decisions. Information encoded in XBRL is smarter; it is intelligent data that can be reused for a myriad of purposes. Adoption of XBRL permits financial analysts, investors, accountants, government agencies, internal users and other interested parties to access, compare, and analyse data in ways that are not currently practical or even possible.

Approximately 450 of the world's leading companies, associations, and government agencies are working together to develop XBRL, a standard that enables preparers of business reports to meet business reporting demands effectively and cost-efficiently.

13th XBRL International Conference: "A Working Reality — Sharing the Same Language"

The next XBRL International Conference will be held from 15 — 19 May 2006 in Madrid, Spain. Co-hosted by XBRL International and XBRL Spain, the 13th XBRL International Conference will focus on the practical uses of the XBRL standard, with particular emphasis on the benefits and advantages gained from putting the standard into practice. This conference will represent the stepping stone from the introductory phase of XBRL to real-world, value-adding applications that are currently being developed in the marketplace. The theme of the conference, "A Working Reality — Sharing the Same Language," presents a significant opportunity for participants to learn how all types of organisations throughout the world are using XBRL to save costs and improve efficiency when handling business information. Keynote speakers include:

- Ian Ball, CEO, International Federation of Accountants
- Corey Booth, CIO, US Securities and Exchange Commission
- Jaime Caruana, Governor, Banco de España
- Manuel Conthe, President, CNMV (Spanish Securities Regulator)
- Thomas Krantz, Secretary General, World Federation of Exchanges
- Michel Maquil, President, Bourse de Luxembourg
- José M. Roldán, Chairman, Committee of European Banking Supervisors (CEBS)
- Xiaoping Zhao, Chairman, Shanghai Stock Exchange

For the latest information on the conference, please visit www.xbrl.org/madrid or www.xbrl2006.info.

XBRL International Establishes Board of Advisors

XBRL International announced in December 2005 that it has established a Board of Advisors in accordance with its bylaws and to accelerate the adoption of XBRL. The roles of the Board of Advisors will be to guide the XBRL International on strategic priorities; advise on the management and direction of XBRL; and to raise funds for the general corporate use of XBRL International. Thomas Krantz, Secretary General of the World Federation of Exchanges, will assume the role of Chairman of the Board. José María Roldán, Chair — Committee of European Banking Supervisors (CEBS), Don Nicolaisan, former Chief Accountant — SEC and Manoj Vaish, leader — Dun & Bradstreet for Middle East and South Asia have also accepted invitations to join the Board.

More advisors will be added to the board in the near future, as XII identifies and engages interested leaders. Remaining members of the Advisory Board will come from the ranks of executive level management, all with a commitment to transforming business reporting through XBRL. Representation will include the general corporate community, banking, securities regulators, senior partners of public accounting firms, executive directors of professional organisations, accounting standard setters, tax authorities, and the analyst community with balanced global representation that covers all major capital markets.

XBRL International Forms Standards Board

XBRL International announced in April 2006 that it is forming a Standards Board to strengthen the quality of its technical materials and manage their production more actively in order to accelerate adoption of XBRL around the world. The formation of the XBRL International Standards Board (XSB) marks a milestone in the maturation of XBRL. XBRL adoption is accelerating rapidly and standards-setters, corporations, regulators, financial markets and the software vendors that serve them increasingly require that technical materials produced by the consortium are both stable and of the highest quality. Objectives of the new Standards Board include:

- Increase uniformly the quality, consistency and stability of XBRL International intellectual property.
- Raise the level of openness and formality of the XBRL International standards setting process. Manage the process more actively, resulting in improved interoperability which will accelerate adoption of the standard.
- Form working groups charged with specific tasks & oversight and approve the work of certain standing working groups.

The XSB will work to ensure the stability of XBRL. In addition to finalising current projects such as versioning, formula, rendering and dimensions, the XSB will be responsible for managing XBRL International's taxonomy recognition program, working with vendors to improve interoperability by clarification and expansion of the conformance suites and providing oversight and encouragement to the GL working group to ensure the adoption of this effort. The XSB will also direct the development of technical training and explanatory materials that foster adoption. Please visit <http://www.xbrl.org/Announcements/XSB-3April2006.htm> for more details

XBRL Implementation Projects Gain Momentum Around the World

Over the last several months, several important projects around the globe have been announced:

■ **Bank of Japan** — The Bank of Japan announced that an XBRL system for gathering data from financial institutions went into live use in February 2006. The system is intended to improve the efficiency of data gathering and will initially collect Balance Sheet data. Its scope will gradually expand. Approximately 500 institutions are reporting through the system.

■ **UK government XBRL services go live** — Companies House, the official body which receives company financial statements in the UK, has started receiving accounts in XBRL. Forbes Computer Systems became the first organisation to file in XBRL in December 2005 under a new Companies House system for handling statements for audit exempt companies. Companies House is gaining necessary experience using XBRL with this project for small company filing. Separately, HM Revenue and Customs has launched a service for company tax filings in XBRL -- a further important step towards general regulatory filing of financial data in XBRL in the UK. Both Companies House and HMRC are looking to expand the use of filing in XBRL over the next year. Additionally, the UK Government has announced that it plans to make the use of XBRL mandatory for all company tax returns due after March 2010. Company tax returns comprise both full financial accounts and corporation tax computations.

■ **U.S. SEC Pilot Program** — In March 2006, the U.S. Securities and Exchange Commission said 17 companies have already agreed to participate in a new programme to test the use of XBRL for financial reporting. The companies will help explore how XBRL can improve the financial reporting process, provide feedback to the SEC and enable investors and analysts to assess new techniques for analysing interactive data. For more information on interactive data and XBRL initiatives at the SEC, please visit <http://www.sec.gov/spotlight/xbrl.htm>

■ **U.S. FFIEC** — The use of XBRL for regulatory bank reporting in the U.S. has achieved major success, according to the Federal Financial Institutions Examination Council (FFIEC). The FFIEC said its XBRL-based

solution, which went live in October had achieved measurable benefits, with an increase from 66% to 95% in data cleanliness, 70% to 100% in accuracy, weeks to hours in timeliness and a 15% rise in the productivity of analysts. For more information, please see whitepaper prepared by the FFIEC at <http://www.xbrl.org/Business/Regulators/FFIEC-White-Paper-31Jan06.pdf>.

■ **Dutch Taxonomy Project** — The Dutch Government is implementing the infrastructure for the electronic exchange of XBRL data, to support the electronic filing of annual financial statements, corporate tax filings and statistical information of 600,000 businesses. The Dutch Taxonomy should be available at the end of 2006. Additionally, the Dutch Taxonomy Project has also won the Dutch National Innovation prize for projects in the public sector. The project came first out of 175 projects put forward for the prize which was awarded at the Innovation Festival in the city of Dordrecht. The Dutch Taxonomy Project is being overseen by the Ministries of Justice and Finance. It promises the largest benefits from any project in a government program aimed at reducing the administrative burden on companies. More information in Dutch can be found at http://www.justitie.nl/nieuws/60407Nationale_Innovatieprijs_voor_aanpak_administratieve_lastendruk.asp

For latest worldwide project news, updates and developments, please see <http://www.xbrl.org/ProjectNews/>.

XBRL International Issues Key Technical Guidance

Over the last several months, XBRL International (XII) has released a range of key technical documents.

■ **Product Roadmap** — XII published a Product Roadmap in February 2006 which sets out the organisation's current plans for the development and release of technical documents and production of training materials. Present plans include the development of stand-alone, add-on modules to the XBRL 2.1 Specification which deal with specific issues, such as taxonomy versioning. Plans also include the release of new or improved guidance documents. It will be updated regularly and is intended to increase awareness of XBRL International activities as well as to support planning by members of the organisation. The Product Roadmap is available at <http://www.xbrl.org/technical/PDT-Roadmap-latest.htm>.

■ **Dimensions 1.0 Specification** — XII updated its Dimensions 1.0 Specification, releasing Candidate Recommendation 2 in March 2006. The specification is a modular, optional extension to XBRL allowing taxonomy authors to define and restrict dimensional information. The new version contains a number of detailed edits and clarifications based

on feedback on the initial Candidate Recommendation released at end December 2005. A typical example of the Dimensions Specification use is the ability to define region and product dimensions for basic elements such as sales – although its potential uses go far beyond this simple case. It provides an important extension of the ability of XBRL to represent the dimensional information which exists in business reporting easily and efficiently. Please see <http://www.xbrl.org/SpecRecommendations/> for the full Specification and supporting information.

■ **Taxonomy Versioning Requirements** — XII published a Taxonomy Versioning Requirements document as a public working draft in February 2006. This document describes the business requirements for controlling the process of creating a new version of an existing taxonomy. For example, taxonomy authors require standard mechanisms for communicating changes between versions of a taxonomy; instance creators need efficient means of understanding differences in taxonomy versions and analysing the possible impact on taxonomy extensions. The document, fully titled 'Taxonomy Life Cycle – Business Requirements for Versioning', describes both functional and technical requirements and sets out a range of use cases for versioning. The Requirements Document is available at <http://www.xbrl.org/SpecRequirements/>.

■ **Link Role Registry Specification** — XII has published a final, recommended version of the Specification for the Link Role Registry – a mechanism which allows the definition of new types of relationships for use in XBRL. This is an important addition to the flexibility and power of XBRL. The XBRL Link Role Registry (LRR) is a public, online listing of new, XLink roles and arc roles (i.e. those that are not included in the XBRL 2.1 Specification or additional modules) that may appear in XBRL taxonomy linkbases and instance documents. It provides structured information about their purpose, usage, and any intended impact on XBRL instance validation. The LRR Specification is available at <http://www.xbrl.org/LRR/>.

COREP XBRL Project Team Publishes Taxonomy

The COREP XBRL Project Team released the first public version of its taxonomy for the Common Reporting (COREP) framework in March 2006. The Committee of European Bank Supervisors is sponsoring the development of the COREP taxonomy in order to help the implementation of common regulatory reporting by European banks. The COREP XBRL taxonomy 1.0 is available for public exposure on www.corep.info.

XBRL Europe Established To Continue Success in Region

XBRL International announced in February 2006 that it has established XBRL Europe in order to support the growing XBRL related activities in Europe. Two years ago, the European Commission signed a one million contract with the XBRL in Europe Consortium to accelerate the development and adoption of XBRL in the European Union. At the end of this successful project, XBRL International has decided to keep a dedicated structure in Europe to sustain these activities. XBRL International has appointed Olivier Servais as XBRL Europe Director. Mr. Servais served as Permanent Secretary during the XBRL in Europe project. He will continue to coordinate all XBRL activities in Europe as Director.

XBRL Expands Around the World

XBRL continues to gain momentum throughout the world, as more countries and global organisations are joining the consortium's efforts to progress the XBRL standard. XBRL Korea has been approved as an established XBRL jurisdiction by the XBRL International Steering Committee following significant progress in implementation of XBRL and recruitment of members. XBRL Korea, which is facilitated by the Korean Institute of Certified Public Accountants (KICPA), now has approximately 27 members drawn from leading Korean companies. It played a key role in encouraging the country's financial regulator, the Financial Supervisory Service (FSS), to adopt XBRL for regulatory reporting. The FSS will run a voluntary XBRL filing programme later this year.

Poland, South Africa and the United Arab Emirates are the newest countries to join XBRL International as jurisdictions. Many other countries are developing XBRL programs and preparing the creation of jurisdictions. This includes several European countries, India, Pakistan and Singapore. XBRL activities are also under way in Chinese financial centres. For information on current jurisdictions, please visit <http://www.xbrl.org/AroundtheWorld/>.

Highlights from 12th XBRL International Conference

The 12th XBRL International Conference, hosted by XBRL International, XBRL Japan and the JICPA was held in Tokyo, Japan in November 2005. The four-day conference themed "Bringing Business into Focus with XBRL — The Revolution in Corporate Reporting," focused on the ways XBRL is revolutionising the business reporting process and demonstrated to attendees the proven advantages of using the technology. With more than 400 delegates from twenty-one different countries, the conference was the best attended Asia-Pacific XBRL International conference to date. Strong participation from countries such as Japan, Korea, China, Taiwan, Thailand, Singapore, New Zealand and Australia confirm that interest in XBRL is growing significantly in the region. For more information and conference presentations, please see <http://www.xbrl.org/PastEvents/>.

XBRL Jurisdiction Reports

Formally established XBRL jurisdictions include Australia, Canada, Germany, International Accounting Standards Committee Foundation (IASCF), Ireland, Japan, Korea, Netherlands, New Zealand, Spain, United Kingdom and United States. Provisional jurisdictions have been formed in Belgium, Denmark, France, Poland, South Africa, Sweden and the United Arab Emirates. XBRL interest and activities are increasing in Argentina, Austria, Brazil, China, Colombia, France, Hong Kong, India, Italy, Luxembourg, Mexico, South Africa, Taiwan, Portugal, Czech Republic, Slovenia, Peru and Venezuela. The XBRL consortium has approximately 450 member organisations throughout the world.

Australia

XBRL Australia has received funding from the Australian Government and the Australian Stock Exchange to build the Australian Extension to the IFRS Taxonomy. This project has commenced and is due for completion mid-2006, when the extension will be submitted to XBRL International for "Approved" status. Refer to www.xbrl.org.au/taxonomies/ATTX2006/ for more information on this project.

The extension taxonomy is being viewed by several agencies within the Australian government as a proof of concept. It is hoped that a successful result to the taxonomy extension project will encourage much wider adoption of XBRL within the Australian economy. The Australian Taxation Office has been active in this regard, sponsoring a meeting late last year with representatives of The Netherlands Taxonomy Project and the New Zealand Government.

Canada

XBRL Canada continues to make progress with taxonomy development and adoption activities. Consortium highlights since October 2005 are noted below.

Taxonomy development: An enhanced GAAP bilingual taxonomy, which includes complete Note disclosures, is planned for release later in 2006. The enhanced taxonomy will also incorporate Canadian accounting standards issued to December 2005.

The 1st Canadian XBRL Conference for Financial Services XBRL Canada hosted a successful conference in October 2005 for the financial services industry. Speakers from Europe and the US, in addition to XBRL Canada members, talked about the benefits and demonstrated examples of XBRL adoption occurring in the global financial services community.

New XBRL Canada constitution: At its Annual General Meeting held in November 2005, XBRL Canada members approved a constitution and operating bylaws which, among other things, streamlines the Canadian Steering Committee (CSC) and provides for sectoral representation on the CSC from the membership.

Marketing, Communications, Research A number of activities are planned and/or in progress.

- Accounting standard setter outreach — staff briefing (April 2006)
- Canadian Investor Relations Institute — plenary session presentation on XBRL at the annual conference (May 2006)
- FEI outreach — XBRL Canada exhibit at annual conference (June 2006)
- CICA Research Study in progress — Role of XBRL in Accounting

Germany

XBRL Germany is preparing to release the second version of the German local GAAP taxonomy to the public. With the release scheduled soon, several members of XBRL Germany have started new projects to include this enhanced taxonomy in their processes and products. Project announcements will be made at more progressed phases.

Members of XBRL Germany presented XBRL related products and solutions at the CeBIT fair in Hannover, Germany, in March 2006.

XBRL Germany held a series of Tagging Workshops in the past and will continue to offer training for preparers and to organise seminars in cooperation with professional partners.

INTERNATIONAL ACCOUNTING STANDARDS COMMITTEE FOUNDATION (IASCF)

In March 2006, the IASCF launched a new Web site, www.iasb.org/xbrl, to showcase the pioneering work of the IASC Foundation's XBRL team. This Web site includes its XBRL news content as an RSS feed. RSS (Really Simple Syndication) is an easy way to be alerted when new content appears on the XBRL section of the IASB Web site.

The IASCF XBRL Team also launched its XBRL Lab, a research and development centre to prototype new techniques in XBRL taxonomy building and the general use of the XBRL specification for IFRS.

The IASCF continues its pioneering and leadership roles in the XBRL International consortium. Kurt Ramin, IASCF team leader, holds the position of Chairman of XBRL International for his third term. Josef Macdonald, the IASCF XBRL Practice Fellow, is the former XBRL International Domain Working Group Chair, and sits on the interim XBRL Standards Board.

The successful XBRL student internship program has a total of five interns from European jurisdictions working on XBRL at the IASCF. They are: Maciej Piechocki (Poland), Harald Schmitt (Germany), Bart Ochocki (Poland), Timo Philipp (Germany) and Michal Piechocki (Poland). Lukas Pruschke (Germany) will join the team in late April.

The IASCF XBRL Team continues to cooperate on IFRS based XBRL projects around the world, including the European Central Balance Sheet Data Offices WGIII reduced format project and the New Zealand e-Government (tax and statistics) IR 10 prototype.

See www.iasb.org/xbrl to find out more about new content relating to:

- XBRL fundamentals and glossary
- The IFRS-GP Taxonomy Improvements Project
- IFRS-GP projects around the world
- XBRL IFRS events
- The IASC Foundation XBRL IP Policy
- IFRS-GP taxonomy label linkbase translations, process and status of releases
- Information archived in a library containing web casts, IFRS — XBRL slide decks for presentations, and other information
- Profiles of Team members, present and past
- The XBRL Laboratory

Kurt Ramin
XBRL Team Leader,
kramin@iasb.org

Josef MacDonald
XBRL Practice Fellow
jmacdonald@iasb.org

Ireland

XBRL Ireland continues to make significant progress. Membership now includes: Accenture, Central Statistics Office, Companies Registration Office, Deloitte, Ernst & Young, Fujitsu Ireland, The Institute of Chartered Accountants in Ireland, The Irish Bankers Federation, KPMG, Microsoft Ireland, PricewaterhouseCoopers, The Revenue Commissioners and REACH along with a number of prominent academics. REACH is the organisation established by the Government of Ireland to develop a framework for electronic government and represents an important endorsement of XBRL within Irish Central Government.

Supporting Adoption in Ireland — In the first quarter of 2006, XBRL Ireland posted the financial statements of Business Reporting Ireland Ltd (BRIL) and Irelands first XBRL instance documents on the jurisdiction Web site.

The Irish Bankers Federation (IBF) has joined XBRL Ireland as a member. The IBF represents members in the financial services industry and is a critical community to support adoption of XBRL in Ireland.

Pilot studies in the Central Statistics Office have been extended to cover the more significant Balance of Payments area. Pilot studies continue in the Companies Registration Office (CRO) along with evidence of potential pilots in other Irish Government organisations.

Marketing & Communications — Web traffic statistics to the XBRL Ireland homepage at <http://www.xbrl-ie.org> demonstrates an almost 100% increase in web traffic between 2005 and 2006, indicating increased awareness and requests for XBRL information. The publication of Business Reporting Ireland Ltd financial results in XBRL saw almost 300 downloads in a 24-hour period.

The Irish academic competition hosted by XBRL Ireland has seen a significant increase in entrants in 2006 versus 2005. This is tangible evidence of the increased interest from the Irish academic community in XBRL.

Taxonomy Development — Development of the Irish GAAP 2.1 Taxonomy continues to progress well. A suite of XBRL v2.1 Irish GAAP financial statements for Irish public companies has been developed to support the taxonomy with plans for more instance documents to further support the taxonomy.

For more information on XBRL in Ireland please visit <http://www.xbrl-ie.org> or contact:

Conor O'Kelly — conor.okelly@hp.com
Simone Doran — xbrl@icai.ie

Japan

Recent highlights in the jurisdiction include:

Bank of Japan's XBRL system goes live — The Financial Systems and Bank Examination Department of the Bank of Japan developed a new data transfer scheme based upon the latest XBRL technology, in order to improve the efficiency of gathering data from financial institutions.

The 12th XBRL International Conference — Co-hosted by XBRL International, XBRL Japan and JICPA, the successful conference was held in Tokyo in November 2005 by over 400 attendees from 21 countries.

Membership growth — Five new members joined since October 2005 including IFIS JAPAN LTD., JUSTSYSTEM CORPORATION, J. Trust Co., Ltd., IBM Business Consulting Services K.K., Business Trust Co., Ltd. XBRL Japan now has 88 voting members.

For more information, please see <http://www.xbrl-jp.org/> or contact:

Nobuyuki Sambuichi
n-sanbuichi@hitachi-system.co.jp
Phone: +81-(0)3-3763-5403

KOREA

Recent highlights in XBRL Korea include:

Membership Growth — Membership in Korea has increased to 32 companies. New members include:

- Accounting Company — Ernst & Young Han Young
- IT Vendor — Esum Technologies Inc.
- Consulting & Insurance Corporations — MCG Inc., Risk Consulting Korea, Hyundai Marine & Fire Insurance Co.
- Media — Joseilbo, Reuters Korea Inc.

Taxonomy Development — XBRL Korea has recognised the importance of taxonomy development and has therefore concentrated on developing successful taxonomies. XBRL Korea has also made efforts to expand XBRL users in Korea. Business projects include:

- Upgrading the version of the Korean GAAP C&I Taxonomy from 2.0 to 2.1. The Korean GAAP C&I Taxonomy 2.1 Working Draft was released and the jurisdiction has been gathering feedback. This version will be submitted to XBRL International for the Acknowledgement and Approval procedure during the second quarter of 2006.
- Financial Business Taxonomy Development – The Financial Business Taxonomy is composed of Banking, Insurance and Broker-Dealers parts. XBRL Korea is developing this taxonomy similar to the Korean GAAP taxonomy mentioned above.

- Developing the Pilot Program for XBRL Taxonomy of Corporate tax — XBRL Korea made a presentation of the operating program for the National TAX Service (NTS) in Korea.

Financial Supervisory Service (FSS) encouraged the use of XBRL for the Disclosure System — FSS in Korea officially announced that it will adopt XBRL for the disclosure process program, which was DART (Data Analysis, Retrieval and Transfer) System, and set up the XBRL Disclosing System Setting Business.

Promotion — XBRL Korea has made efforts to encourage the participation of financial institutions and regulatory agencies who are the best beneficiaries in XBRL. An XBRL conference in January 2006 brought together more than 250 attendants from government & regulatory, listed companies and IT Vendors.

Netherlands

At the end of March 2006, XBRL Netherlands membership reached 52 companies. Current activities of XBRL Netherlands are:

- The release of the Dutch taxonomy — The taxonomy is being developed and maintained by the Dutch Government and contains the XBRL data elements to support the electronic filing of the yearly financial statements, corporate tax filings and statistical information. Currently, the 0.9.2 version is publicly available. The 1.0 version will be available before the end of 2006. More information about this project and the Dutch taxonomy can be found in the report "Functionality and possibilities of the Dutch taxonomy", including "Reducing administrative burdens through standardisation" at www.xbrl-ntp.nl.
- The Dutch Taxonomy Project and XBRL Netherlands are working closely together on:
 - Approaching the software vendors to make sure they are able to have XBRL enabled software and tools available.

- Developing the infrastructure for the electronic exchange of XBRL data.
- Organising several informative sessions, including a four-day conference at the end of June, to inform businesses and financial intermediaries about the electronic exchange of information based on XBRL and the infrastructure developed.
- Providing technical XBRL training.

- The Dutch Government has also started to develop an extension on the Dutch Taxonomy to be used by the financial services for credit risk filings (based on Basel II).

New Zealand

There is general awareness of what XBRL is and the benefits to the New Zealand's business community, yet there is still work to be done before XBRL becomes a reality. The major driver for XBRL's implementation is the Government's need to reduce compliance cost on New Zealand's SME's. The development of the Government taxonomy, lead by New Zealand Inland Revenue, is a very positive development in the jurisdiction. The Working Group, of which XBRL-NZ is a member, is making steady progress having got the Terms of Reference, Project Charter and Project Plan in place. A phased approach is being deployed starting with a Feasibility Study using a simple reporting information supply chain involving at least two government agencies as a proof of concept and to test XBRL interoperability. This will be followed by a series of Pilot Studies using complex reporting information supply chains involving multiple government agencies. Finally, by the 3rd quarter 2008, the development of taxonomy that supports the Pilot Studies.

XBRL NZ continues to watch the Australian taxonomy development with interest. XBRL Australia and XBRL New Zealand are working together to ensure their taxonomies maximise the opportunity to share business related information between the two countries.

There is a pilot XBRL project underway conducted by Statistics New Zealand with one of New Zealand's major companies.

Mark Hucklesby
mark.hucklesby@nz.ey.com

Spain

Since July 2005, two Spanish Regulators are receiving real data in XBRL. Currently, there are over 3000 listed companies that report in XBRL to the Spanish Stock Exchange Commission (Comisión Nacional del Mercado de Valores or CNMV). Plus, nearly all Spanish Banks report in the Individual and Consolidated Public Statements in XBRL to the Bank of Spain. More information about these projects is available at www.cnmv.es and www.bde.es.

As a result of these major implementation initiatives, the financial community of Spain is showing more interest about XBRL. Currently, XBRL Spain is composed of more than 40 members from very different industries and companies, both public and private, which demonstrates an outstanding example of collaboration in order to improve the efficiency / effectiveness of Spanish financial information.

Due to this strong support, the activities of XBRL Spain expand over the local borders. XBRL Spain helped organise the 4th European Banking Supervisors Workshop (75 attendants, Madrid — January), 1st Iberoamerican XBRL Workshop (200 attendants, Bogotá — February) and the 1st Iberoamerican XBRL Congress (400 attendants, Buenos Aires — April).

XBRL Spain is taking a lead role and working with XBRL International to organise the 13th XBRL International Conference in Madrid Spain from 15 – 19 May 2006. XBRL Spain encourages those in the XBRL community to take advantage of this unique opportunity to join colleagues at the conference and enjoy the social activities that only Spain offers. More details and registration are available at www.xbrl2006.info.

United Kingdom

The accounting review of the current XBRL UK GAAP taxonomy (published May 2004) is continuing to make good progress. This is expected to lead to the further revision of this taxonomy, mainly in respect of the reporting of accounting policies, textual information and other non-monetary items. Other XBRL UK participants have been engaged in development and testing activities within their organisations.

The jurisdiction is planning a public event to be held in June 2006, following a recent report to government (the Carter Report) on the electronic filing of tax returns, which recommended that all companies should be required to file their company tax returns online, using XBRL, and make payments electronically, for returns due after 31 March 2010.

United States

XBRL US has been very active the past six months, in all areas of taxonomy development, adoption, and events.

The US Domain Working Group (DWG) has recently completed initial work on the Broker-Dealer taxonomy for US GAAP, and the taxonomy is in Public Review. The DWG is also working on taxonomies for Pensions and Leases notes, and has completed a long-term strategic plan for taxonomy development and maintenance.

Two major US government regulatory agencies have continued work on adoption of XBRL into their regulatory processes. Members of the Federal Financial Institutions Examination Council (FFIEC), the Federal Deposit Insurance Corporation (FDIC), the Federal Reserve System (FRS), and the Office of the Comptroller of the Currency (OCC), have implemented an XBRL-based solution for their quarterly bank Call Report process. A white paper describing the significant and quantifiable benefits may be found at www.xbrl.org/us/resources.

The Securities and Exchange Commission continued its movement towards eventual mandatory XBRL filings by announcing an XBRL test group, and promises expedited processing of filings and other benefits for companies who commit to regular XBRL filings. For more details of the program, please see www.xbrl.org/us/secvfp.

XBRL-US conducted a very successful three-day members meeting and public conference in January 2006, hosted by Adobe Systems in San Jose, California. SEC Chairman Christopher Cox and other keynote speakers presented to over 200 attendees extolling the benefits of XBRL on the Public Day of the conference. The program included two tracks, one for software developers focused on the market potential for XBRL-based products, and the other for investors focused on the benefits of XBRL-tagged financial information. Presentations from the event are available at www.xbrl.org/us/events.

XBRL-US is planning more events in 2006, including two public events the last week of June. The first event will be held in Washington D.C. and hosted by the FDIC, focused on government agency use of XBRL. The second event will be hosted by Microsoft in New York City and targeted at the financial analyst community. Information about these events will be available soon at www.xbrl.org/us/events.

The US jurisdiction will also be the host for the 14th XBRL International Conference the first week of December 2006 in Philadelphia, USA. Please stay tune for more details.

For information please see www.xbrl.org/us or contact:

Provisional Jurisdiction Reports

Belgium

The Belgian jurisdiction is involved in two important projects:

- The final version of the Belgian taxonomy was presented in January 2006 to the members of XBRL Belgium. This taxonomy is based on the Belgian GAAP and will be used by non-financial companies for the creation of their statutory annual accounts to be filed with the National Bank (Central Balance Sheet Office) in the form of XBRL-instance documents beginning in April 2007. All files and documentation are available on the Web site.
- The National Bank of Belgium and the Banking, Finance and Insurance Commission has developed a Belgian taxonomy, reflecting the national regulatory IFRS reporting scheme. The taxonomy was created as an extension of the IFRS taxonomy of the IASCF and has been used since January 2006 for the consolidated regulatory reporting of credit institutions. The first reports are expected for June 2006.

For more information on XBRL Belgium, please visit: www.xbrl.be or contact:

Camille Dümm
camille.dumm@nbb.be
Central Balance Sheet Office
National Bank of Belgium
Boulevard de Berlaimont 14
B-1000 Brussels, Belgium
Phone : +32 2 221 25 52
Fax : + 32 2 221 32 66

France

XBRL France is now a working jurisdiction with approximately twenty members and a governance structure in place. (See www.xbrl.org/fr/frontend.aspx?clk=SLK&val=83) Major milestones since the last progress report follow:

- XBRL France held its first public day in Paris in January 2006. There were approximately 200 attendees including many from the banking industry. There was significant support from CEBS and XBRL in Europe. At the event, the French Banking Commission announced the mandatory use of XBRL by March 2007 for the whole French Banking industry with the COFINREP project.
- There are five working groups operating in France: Marketing Communications, French GAAP Taxonomy, French IFRS Taxonomy, Banking Industry Taxonomy (COREP & FINREP) and the technical group. The main objectives in these Working groups are to :
 - Develop the French GAAP taxonomy for 2006
 - Contribute to the French translation of IFRS Taxonomy (with IASCF, XBRL Belgium and XBRL Canada).

- Guide the COFINREP Project led by Banque de France where French adaptations of COREP and FINREP taxonomies are launched with the involvement of the whole industry.

- XBRL France has made significant progress with marketing communication tools. The jurisdiction launched a new Web site (www.xbrl.org/fr) and prepared a white paper in French.
- New members since the beginning of 2006 include: GE FactoFrance, Informatique International Ingénierie (III), Office de Coordination Bancaire et Financière (OCBF) and PSA Peugeot Citroën.

For more information on XBRL France, please contact:

Gilles Maguet
XBRL France Secretary General
gilles.maguet@xbrl.fr

Denmark

XBRL Denmark continues to make progress on XBRL development and adoption. More details will be provided in the next report.

SOUTH AFRICA

XBRL South Africa (XBRL SA) was approved by XBRL International Steering Committee in November 2005. The independent facilitator of the jurisdiction is the South African Institute of Chartered Accountants (SAICA) and has members in the following supply chains: accountants and auditors, securities exchange, software vendors, banks, financial information providers and regulators.

XBRL SA has organised itself into two working groups, the marketing working group and the taxonomy working group. The marketing working group has planned and embarked on various initiatives to create more awareness of XBRL in South Africa. The XBRL SA Steering Committee has decided that the development of the South African Taxonomy is of critical importance for the adoption of XBRL in South Africa.

The Taxonomy Working Group has already:

- Published and approved the South African Reporting Requirement extensions to the IFRS GP Taxonomy, as South Africa has adopted IFRS Standards;
- Commenced with the architecture and development of the required taxonomies;
- Commenced its internal review process of the SA taxonomies

For more information on XBRL South Africa, please visit www.xbrl.org/za or contact:

SWEDEN

XBRL Sweden continues to make progress on their XBRL taxonomy development. There are presently two taxonomies developed: one for small to mid-size companies and one for the Swedish audit report. Both taxonomies are currently Internal Working Drafts (IWD).

XBRL Sweden currently has 22 members, with four of those being the largest software companies in Sweden: Hogia, Norstedts Juridik, Microsoft and VISMASPCS.

The Swedish Companies Registration Office, Bolagsverket, has been involved in the taxonomy development in XBRL Sweden. Bolagsverket has decided to have a pilot project ready to test in April 2006. They will test to receive financial statements in XBRL, using the Swedish GAAP taxonomy. Only members of XBRL Sweden are allowed to participate.

The main objective for XBRL Sweden is to:

- Coordinate a successful pilot at the Swedish Companies Registration Office by 1 July 2006
- Develop Public Working Drafts of the taxonomies mentioned above ready by September 2006
- Begin work on the taxonomy for consolidated accounts
- Arrange seminars and training days during the second half of 2006

XBRL Sweden has two working groups operating: Domain and Marketing & Communication

XBRL Vendor Updates*

Batavia Business Reporting

www.batavia-xbrl.com

Batavia Business Reporting added ease-of-use to their XBRL product family: **Batavia XBRL Link Editor**. Maintain **Batavia XBRL Data Driver** link files visually through Drag&Drop. Offering easy configuration, BXDD is the fastest track towards XBRL support in ERP and Accounting System solutions. Batavia XBRL is Java™ and has been integrated in several Enterprise backend systems.

Business Wire

www.BusinessWire.com

Business Wire is the global leader in commercial news distribution. Companies depend on Business Wire to transmit news releases and regulatory filings to the financial community. Business Wire's **EarningsDirect** is the first non-technical method for tagging earnings news releases, enabling companies to communicate earnings directly to the capital markets in XBRL.

CaseWare

www.caseware.com and www.caseware-idea.com

CaseWare and CaseWare IDEA have developed XBRL-enabled tools that extend across the business reporting and assurance supply chain. With **Working Papers, IDEA, Scenarios and CaseWare XBRL Benchmarking**, users can import a tagged GL, analyse data, produce tagged financial statements, and upload financial data to a web server for analysis and benchmarking.

CoreFiling Limited

<http://www.corefiling.com>

CoreFiling provides **innovative solutions and services for compliance and regulatory filing**. Our customers understand the advantage of XBRL-based data collection and management. They benefit from our unique technologies and straightforward approach. From sensible consulting advice, assistance with VFP filing, through to full turn-key solutions, we can help with your reporting problems.

DecisionSoft

www.decisionsoft.com

From taxonomy design to instance document processing, DecisionSoft's products and services provide an end-to-end solution for XBRL implementation. DecisionSoft's **True North suite** provides enterprise-strength XBRL processing. Our flagship **True North Validator** is used by regulators on both sides of the Atlantic. It's ideal for integration into accounting and reporting packages producing XBRL for regulators and markets.

Deloitte.

www.deloitte.com

Deloitte is actively involved in XBRL development around the globe in both the public sector and industry. Deloitte has the experience to support clients in evaluating the benefits of XBRL for specific purposes and helping them to understand and implement XBRL solutions. Contact Yossef Newman, ynewman@deloitte.com or Dave van den Ende, dgvandenende@deloitte.nl.

DynAccSys

www.dynaccsys.com or www.xbratools.com

Xabra™ is an extensible business integration framework (XBI). It facilitates financial reporting and data integration using XBRL GL as a bridge between source data (CSV files, SQL databases) and target applications. Xabra™ enables the reuse of standardised data in end-use software, including internal and regulatory reporting through XBRL FR taxonomies.

EDGAR Online, Inc.

www.edgar-online.com

EDGAR Online launched **Xcelerate**, a product leveraging our XBRL expertise, and enabling agents, regulators and exchanges to generate XBRL documents on behalf of their customers, constituents and members. EDGAR Online continues to GROW our I-Metrix suite of XBRL-tagged data and analytics products that facilitate analysis and provide timely market and fundamental data.

Fujitsu

<http://software.fujitsu.com/en/interstage-xwand/activity/xbrltools/index.html>

Leading Financial Governing Bodies worldwide acknowledged Fujitsu's XBRL mastery by choosing **Interstage XWand** and Interstage **XWand Manager** for:

- Server-side XBRL validation, integration
- Collaborative taxonomy development
- Receiver-solutions: receipt, archival, reporting, search
- Client-side taxonomy, instance creation
- XBRL 2.1 compliant FRTA, FS, GL, COREP support

Hitachi, Ltd.

www.hitachi.co.jp/XBRL or www.hitachi.us/XBRL

Hitachi released XBRL2.1 compliant version of **HitachiBusinessReportingProcessor(HBRP)**. HBRP provides standard XBRL-DOM and conforms to Full-Conformance-Suite. HBRP is also ready to support new functions such as formula linkbase using XPath2.0, taxonomy edit, FRTA-conformance, and FRIS-conformance. As a leading global solutions provider with XML expertise, we provide business users with comprehensive XBRL-related-services.

Hitachi Systems & Services, Ltd.

www.hitachi-system.co.jp/xirute/e

Hitachi Systems & Services has user-friendly XBRL tools. **XiRUTE Taxonomy Editor/Instance Creator** works with Microsoft Excel. **Xinba/XiRUTE FRP** is the analyser and viewer of instances. **XiRUTE Library** for .NET/Java is the programming APIs supporting Microsoft .NET Framework & Java. These libraries offer data conversion (CSV, XBRL), validation and viewing functionality.

HighRidge Technologies

www.ibanknet.com and www.highridgetech.com

iBanknet.com specializes in the publishing of Bank, Bank Holding Company, Thrift, and Credit Union interactive data. Powered by docKinetics AI and employing 7 taxonomies which contain over 4,000 core concepts, ibanknet.com renders custom styled documents in over 15 formats, sourced from the regulatory filings of over 20,000 financial institutions.

Microsoft

www.frxsoftware.com

Microsoft®FRx® is a financial reporting application that gives small and midsized businesses and divisions of large enterprises immediate control of their entire financial reporting process. FRx Software offers enhanced support for XBRL 2.1 in FRx 6.7, which is available for use with virtually any general ledger.

Plan A

<http://webAR.PlanA.com>

Plan A delivers XBRL-open, web-based communication solutions to government agencies and global corporations. Plan A, the principal advocate and consultant on GRI and G3 reporting standards in the US Midwest, deploys **webAR™** for measuring and disclosing economic, social and environmental key performance indicators, and to facilitate triple bottom line valuation.

PricewaterhouseCoopers

www.pwc.com/xbrl

PricewaterhouseCoopers is an active participant in the XBRL market community and provides clients with **seamless integration of XBRL expertise** within its innovative business reporting, risk management, performance solutions and compliance services. PricewaterhouseCoopers is currently helping clients around the world efficiently leverage the benefits of XBRL-enhanced reporting environments.

Rivet Software

www.rivetsoftware.com

Rivet Software's **Dragon Tag™** XBRL enabler is the first easy-to-use and affordable Microsoft Office add-in that simplifies converting existing Microsoft Word and Excel financial data into XBRL format. Dragon Tag supports XBRL 2.1 and shields users from the technical complexity of XBRL, ensuring XBRL documents are created quickly and correctly.

R.R. Donnelley & Sons Company

www.rrdgc.com

Leverage the power of XBRL and participate in the SEC's XBRL Voluntary Filing Program via **RR Donnelley's and EDGAR Online's joint offering**. RR Donnelley will process and generate XBRL documents on filers' behalf, eliminating the complexity and cost of creating XBRL documents in-house and submit companies' XBRL-formatted documents to the SEC. Contact xbrl@rrd.com.

Semansys Technologies

www.semansys.com

Semansys — specialist in software for taxonomy and instance creation, processing and analysis — introduced **Next Generation XBRL productivity tools**.

Semansys offers solutions for easy implementation of digital reporting, including **single button regulatory reporting**, solutions for software vendors and — with Microsoft — the **XBRL Compliance Suite** for managing reporting processes.

Snappy Reports

www.snappyreports.com

Snappy Reports provide XBRL software and consulting services. **Snappy Reports** is a very easy to use, full spectrum XBRL solution product. It interfaces with Excel and most accounting systems and includes an easy to use taxonomy builder/mapper. Our XBRL processor seamlessly processes data through to Excel, instance documents, Word or the web. Our consultants provide expert XBRL services to get the job done.

Software AG

xbrl.softwareag.es/drp and www.softwareag.com

Software AG's **digital reporting platform** and **crossvision** form a comprehensive and innovative approach to synchronizing business with IT. The digital reporting platform is a solution for XBRL information processing and management. Crossvision is the SOA suite allowing enterprises to rapidly and cost-effectively leverage existing assets and create new business processes.

Standard Advantage

www.standardadvantage.com

Standard Advantage is a **consultancy that helps governments, software vendors, and professional services** companies to achieve the savings and flexibility available to them through commitments to technology standards. The CEO, Walter Hamscher, co-authored the XBRL specification and is a member of the XBRL International Steering Committee and Past Chair of XBRL International.

UBmatrix

www.ubmatrix.com or www.ubmatrix.com/products/productsOverview.asp

UBmatrix offers industry **leading software for liberating information trapped in applications and documents**. Our software, leveraging the power of eXtensible Business Reporting Language (XBRL), makes the structure and underlying meaning of information portable within your organisation and for exchange over the Internet. The result: improved efficiency, data quality, and transparency.

XBI Software Inc

www.xbisoftware.com

XBI Software Inc provides XBRL consulting services to government agencies and creates **STR (straight through reporting) applications** for banks and other financial institutions. Its CovenantMonitor, under development, will use XBRL to monitor borrowing clients' banking covenants accurately, efficiently and inexpensively.

**XBRL International includes vendor update information from XBRL® members as a convenience to those interested in XBRL's development and progression. XBRL International cannot take responsibility for the accuracy of such statements, nor does inclusion of a vendor imply endorsement of their products or services.*
